(54) Title: PELVIS REMEDIAL SEATED DEVICE AND CONTROL METHOD THEREOF

(57) Abstract: The present invention relates to a pelvis remedial seated device and a control method thereof for remedying into its original place a women's widened pelvis after child birth. The pelvis remedial seated device is comprised of a seat (10) included a seat cushion (11) on which an occupant is to be seated and left/right seat sides (12a, 12b) provided uprightly at each side end of the seat cushion (11); a pair of air bags (20a, 20b) nested on an inner side of each side for enabling themselves to be expanded or contracted by air supplied into or discharged from the inside of the air bag; and air injection means for providing air pressure to the air bags (20a, 20b); wherein the expanding air pressure in the air bags presses the pelvis portion of an occupant. According to the present invention, the air pressure can artificially press the pelvis portion of the woman with seated or lying down relaxedly without constraining the human body so that rapid the pelvis remedy can be attained.
